

Mohammed Abdul Hamid Mohammed Al Abri

Computer Science Graduate

✉ imohammedalabri@gmail.com ☎ +968 98964622 📍 Muscat, Oman 🔗 linkedIn 🐙 GitHub

👤 PROFILE

Computer Science graduate (Sultan Qaboos University) with a Cybersecurity specialization and hands-on backend engineering experience from an intensive .NET Bootcamp. Led a 4-person team through the full software development lifecycle from ERD design to a layered ASP.NET Core Web API using Entity Framework Core, SQL Server, JWT authentication, and Git-based sprint workflows. Built an AI-driven vulnerability scanner integrating real-time NVD data as a graduation project, combining a security-first mindset with practical software engineering skills. Seeking a Software Engineer, .NET Developer, or Application Security role.

🎓 EDUCATION

Bachelor's Degree in Computer Science, *Sultan Qaboos University* 09/2020 – 02/2026 | GPA 3.56
Specialized in **Cybersecurity and Computing Infrastructure**.

General Education Diploma, *Dhirar bin Al-Azwar School* 2020 | 96.7%

📁 TRAINING EXPERIENCE

Backend .NET Developer & Team Lead, *Codeline/Rihal Bootcamp* 04/2026 – Present | Muscat

- Led a 4-person team as Team Lead on a citizen issue-reporting Web API (Oman Community Services Platform), owning architecture decisions, branching strategy, and shared codebase integrity.
- Designed and validated a 10-entity relational data model, resolving cardinality issues (1:M, M:N) and finalizing an ERD before implementation began.
- Built backend features using ASP.NET Core Web API with a three-layer architecture (Repository → Service → Controller), following Separation of Concerns principles.
- Implemented data access with Entity Framework Core and SQL Server, including soft-delete patterns and role-based access scoping.
- Applied JWT authentication and DTO-based request/response contracts to secure API endpoints, and tested endpoints using Swagger.

Full Stack Development Intern, *Rihal & Codeline* 07/2025 – 09/2025 | Muscat

- Built full-stack features using Git-based Agile workflows, applying foundational networking and API integration concepts in real project sprints.
- Strengthened collaborative development practices that carried directly into the later .NET Bootcamp capstone.

Information Security Management, *Ooredoo* 06/2024 – 08/2024 | Muscat

- Rotated across SOC, Application Security, GRC, and Network Security teams, gaining exposure to enterprise security operations.
- Supported SIEM-based monitoring and incident response processes, and contributed to DLP compliance audits.
- Gained hands-on exposure to firewalls, Privileged Access Management (PAM), VPNs, and Secure SDLC practices.

CERTIFICATES

Certified in Cybersecurity (CC)

ISC2

Introduction to AI Tools and Productivity

Ministry of Labour

Metasploit for Beginners

Coursera

Wireshark for Packet Capture

Coursera

SKILLS

Programming Languages

C#, Java, Python, SQL

Security

SIEM, Nmap, Wireshark, MITRE ATT&CK Framework, Access Control, Cryptography, Secure SDLC

Backend

ASP.NET  Core Web API, Entity Framework Core, Spring Boot, RESTful API design, JWT Authentication

Cloud & DevOps

Git, GitHub Actions, CI/CD fundamentals

PROJECTS

Oman Community Services Platform, Capstone Project, Team Lead (Codeline .NET Bootcamp) 2026

Led a 4-person team building a RESTful Web API that lets citizens report local community issues (road damage, water leaks, waste management) directly to the responsible government department. Designed a 10-entity relational data model with automatic department routing, structured status workflows, comments, notifications, and citizen feedback ratings. Built on ASP.NET  Core Web API with Entity Framework Core and SQL Server, following a three-layer architecture (Repository → Service → Controller). Managed delivery through a structured GitHub workflow with 56 tracked issues across two sprints.

Hybrid Automated Vulnerability Scanner for GitHub Repositories, Graduation Project 09/2025 – 01/2026

Designed and developed a system that integrates software development, machine learning, and cybersecurity to detect vulnerabilities in both source code and third-party libraries. The project involved implementing manifest file scanning with real-time integration to the National Vulnerability Database (NVD) to identify vulnerable dependencies. Extensive experimentation was conducted across multiple datasets and machine learning models, using performance metrics to evaluate and select the most effective approach for vulnerability prediction. The solution was further enhanced by automating security analysis workflows through GitHub Actions, enabling scans to be triggered automatically on code changes.

ACTIVITIES & ACHIEVEMENTS

Representative, Comex Exhibition 2025

2025

Represented Codeline at Comex Exhibition 2025, engaging with visitors and promoting the company's initiatives in software development and local talent growth.

Dean's List

2021 – 2024

Recognized for outstanding academic performance, achieving honors and distinction in multiple terms.
